**RE: SECONDARY VISION CARE TESTING**

**DATE: FEBRUARY 2010**

---

The NSSBA Members' Employee Benefits (MEB) Committee wants to inform members of the NSSBA Group Insurance Plan of secondary vision care testing that may be performed during a vision care examination.

Basic vision health testing, including refractions, are insured through your Supplementary Health Insurance Plan under the vision care coverage component.

Some vision care professionals are performing secondary vision care testing in addition to the basic vision health testing and refractions. These tests may include visual field testing, digital fundus photography and HRT 3D imaging. These secondary tests are not covered items under your vision care benefit.

Therefore, you should discuss with your vision care professional the benefit and cost to you for these procedures to avoid any confusion at the time of submitting a vision care examination claim.

If you have any questions, please do not hesitate to contact Johnson Inc. at 1-800-453-9543 (toll-free) or 453-9543 (local).
